

# Machine Learning Methods (Third Edition)

Hang Li

## Part 1 (Volume 1) – Supervised Learning

### Chapter 1: Introduction to Machine Learning

#### 1.1 Definition of Machine Learning

#### 1.2 Content of This Book

### Chapter 2: Introduction to Supervised Learning

#### 2.1 Overview of Supervised Learning

#### 2.2 Supervised Learning Problems

#### 2.3 Overview of Supervised Learning Methods

### Chapter 3: Linear Regression

#### 3.1 Linear Regression Model

#### 3.2 Learning Algorithms for Linear Regression

#### 3.3 Ridge Regression and Lasso

### Chapter 4: Perceptron

#### 4.1 Perceptron Model

#### 4.2 Perceptron Learning Strategy

#### 4.3 Perceptron Learning Algorithm

### Chapter 5: K-Nearest Neighbors

#### 5.1 K-Nearest Neighbors Algorithm

#### 5.2 K-Nearest Neighbors Model

#### 5.3 Implementation of K-Nearest Neighbors: k-d Tree

## Chapter 6: Naive Bayes

### 6.1 Naive Bayes Model

### 6.2 Naive Bayes Learning Algorithm

## Chapter 7: Decision Trees

### 7.1 Decision Tree Model

### 7.2 Decision Tree Learning

### 7.3 CART Algorithm

## Chapter 8: Logistic Regression and Maximum Entropy Models

### 8.1 Logistic Regression Model

### 8.2 Maximum Entropy Model

### 8.3 Learning Algorithms

## Chapter 9: Support Vector Machines

### 9.1 Linear Support Vector Machines and Hard Margin Maximization

### 9.2 Linear Support Vector Machines and Soft Margin Maximization

### 9.3 Nonlinear Support Vector Machines and the Kernel Trick

## Chapter 10: Boosting Methods

### 10.1 AdaBoost Algorithm

### 10.2 Gradient Boosting Algorithm

## Chapter 11: Hidden Markov Models (HMM)

### 11.1 Hidden Markov Models

### 11.2 Probability Computation Algorithms

### 11.3 Learning Algorithms

### 11.4 Prediction Algorithms

### 11.5 Probabilistic Directed Graphical Models

## Chapter 12: Conditional Random Fields (CRF)

### 12.1 Probabilistic Undirected Graphical Models

### 12.2 Conditional Random Field Model

12.3 Probability Computation Algorithms

12.4 Learning Algorithms

12.5 Prediction Algorithms

Chapter 13: Summary of Supervised Learning Methods

Part 2 (Volume 2) – Unsupervised Learning

Chapter 14: Introduction to Unsupervised Learning

14.1 Unsupervised Learning Problems

14.2 Overview of Unsupervised Learning Methods

Chapter 15: Clustering Methods

15.1 Clustering Problems

15.2 Hierarchical Clustering

15.3 K-Means Clustering

Chapter 16: Singular Value Decomposition (SVD)

16.1 Definition and Properties of Singular Value Decomposition

16.2 Singular Value Decomposition Algorithms

16.3 Singular Value Decomposition and Matrix Approximation

Chapter 17: Principal Component Analysis (PCA)

17.1 Population Principal Component Analysis

17.2 Sample Principal Component Analysis

Chapter 18: EM Algorithm and Variational EM Algorithm

18.1 EM Algorithm

18.2 Gaussian Mixture Models and the EM Algorithm

18.3 Variational EM Algorithm

Chapter 19: Markov Chains

19.1 Definition of Markov Chains

19.2 Properties of Markov Chains

19.3 Discrete-Time Markov Processes

Chapter 20: Markov Chain Monte Carlo (MCMC)

20.1 Monte Carlo Methods

20.2 Markov Chain Monte Carlo Methods

20.3 Metropolis-Hastings Algorithm

20.4 Gibbs Sampling

Chapter 21: Latent Semantic Analysis (LSA) and Non-negative Matrix Factorization (NMF)

21.1 Word Vector Space and Topic Vector Space

21.2 Latent Semantic Analysis

21.3 Non-negative Matrix Factorization

Chapter 22: Probabilistic Latent Semantic Analysis (PLSA)

22.1 Model of Probabilistic Latent Semantic Analysis

22.2 Algorithms for Probabilistic Latent Semantic Analysis

Chapter 23: Latent Dirichlet Allocation (LDA)

23.1 Model of Latent Dirichlet Allocation

23.2 Algorithms for Latent Dirichlet Allocation

Chapter 24: Summary of Unsupervised Learning Methods

Part 3 (Volume 3) – Deep Learning

Chapter 25: Introduction to Deep Learning

25.1 Deep Learning Problems

25.2 Overview of Deep Learning Methods

25.3 Applications of Deep Learning

Chapter 26: Feedforward Neural Networks (FNN)

26.1 Feedforward Neural Network Model

- 26.2 Learning Algorithms for Feedforward Neural Networks
- 26.3 Optimization Algorithms for Deep Learning
- 26.4 Regularization in Deep Learning

#### Chapter 27: Convolutional Neural Networks (CNN)

- 27.1 Convolutional Neural Network Model
- 27.2 Learning Algorithms for Convolutional Neural Networks
- 27.3 ResNet
- 27.4 Application: Image Classification

#### Chapter 28: Recurrent Neural Networks (RNN)

- 28.1 Recurrent Neural Network Model
- 28.2 LSTM and GRU
- 28.3 Learning Algorithms for Recurrent Neural Networks
- 28.4 Application: Language Generation

#### Chapter 29: Transformer

- 29.1 Sequence-to-Sequence Models
- 29.2 Transformer Model

#### Chapter 30: GPT and BERT

- 30.1 Pre-trained Language Models
- 30.2 GPT Model
- 30.3 BERT Model
- 30.4 Application: Language Understanding and Generation

#### Chapter 31: Autoencoders (AE)

- 31.1 Autoencoders
- 31.2 Denoising Autoencoders
- 31.3 Sparse Autoencoders

#### Chapter 32: Generative Adversarial Networks (GAN)

- 32.1 Generative Adversarial Network Model

32.2 Learning Algorithms for Generative Adversarial Networks

32.3 Application: Image Generation

Chapter 33: Variational Autoencoders (VAE)

33.1 Variational Autoencoder Model

33.2 Learning Strategies for Variational Autoencoders

33.3 Learning Algorithms for Variational Autoencoders

33.4 Application: Image Generation

Chapter 34: Diffusion Models

34.1 Basic Principles

34.2 Denoising Diffusion Probabilistic Models (DDPM)

34.3 Score Matching with Langevin Dynamics (SMLD)

34.4 Application: Image Generation

Chapter 35: Flow Matching Models

35.1 Basic Principles

35.2 Flow Matching Problem

35.3 Flow Matching Methods

35.4 Comparison Between Flow Matching Models and Diffusion Models

Chapter 36: Summary of Deep Learning Methods

Part 4 (Volume 4) – Reinforcement Learning

Chapter 37: Introduction to Reinforcement Learning

37.1 Reinforcement Learning Problems

37.2 Overview of Reinforcement Learning Principles and Methods

37.3 Applications of Reinforcement Learning

Chapter 38: Markov Decision Processes

38.1 Definition of Markov Decision Processes

38.2 Dynamic Programming Algorithms

## Chapter 39: Multi-Armed Bandits (MAB)

### 39.1 Multi-Armed Bandit Problem

### 39.2 Multi-Armed Bandit Algorithms

## Chapter 40: Value-Based Methods

### 40.1 Overview of Value-Based Methods

### 40.2 Model-Free Prediction

### 40.3 Model-Free Control

### 40.4 Summary of Value-Based Methods

## Chapter 41: Deep Q-Networks (DQN)

### 41.1 Value Function Approximation

### 41.2 DQN Algorithm

## Chapter 42: Policy-Based Methods

### 42.1 Overview of Policy Gradient Methods

### 42.2 REINFORCE Algorithm

### 42.3 Actor-Critic Algorithms

### 42.4 Summary of Policy Gradient Methods

## Chapter 43: Proximal Policy Optimization (PPO)

### 43.1 TRPO Algorithm

### 43.2 PPO Algorithm

### 43.3 Application: Large Language Models

## Chapter 44: Summary of Reinforcement Learning Methods

## Appendices

### A Probability Theory

#### A.1 Basic Concepts and Theorems

#### A.2 Common Probability Distributions

### A.3 Stochastic Processes

### A.4 Stochastic Differential Equations

## B Statistics

### B.1 Maximum Likelihood Estimation

### B.2 Bayesian Inference

## C Information Theory

### C.1 Information Entropy and KL Divergence

### C.2 Data Compression

## D Linear Algebra

### D.1 Matrix Spaces

### D.2 Linear Transformations and Matrix Decompositions

## E Optimization Theory

### E.1 Gradient Descent Methods

### E.2 Newton's Method and Quasi-Newton Methods

### E.3 Lagrange Duality

## F Functional Analysis

### F.1 Basic Concepts and Theorems

### F.2 Hilbert Spaces
